Laboratory Sheet 2

1. Create an interactive image gallery. In the centre of the screen there should be a large image. Under the image there should be a ribbon of small images (previews). When the user clicks one of the previews, the large image at the top should change to full-size version of the clicked preview. You may need to use **element.src**.
2. Add "day" and "night" modes to your gallery. Clicking a button/link should change the background colour of your gallery between dark and bright. You may need to use **bgcolor** attribute.
3. Create a page with 5 questions about JavaScript. There should be a hidden answer under each question. When the user clicks a "show answer" button/link the answer should appear. The text on the button/link should change to "hide answer". Clicking the button/link again at this point should hide the answer and change button/link back to its initial state.
4. Add three different features that use JavaScript to your website from Week 1.
